

# Safety & Installation Instructions

v1.3-10.23

These instructions are provided for your safety in order to prevent the risk of Fire, Electric shock or Injury. It is vitally important that they are read in their entirety before installing your fitting. Please retain for future reference.

1. If you are in any doubt consult a qualified electrician as to the installation of the fitting. Install in accordance with current IEE wiring regulations. It is recommended that this fitting is installed by a qualified electrician.
2. Ensure that the electrical supply is OFF. Disconnect the electrical supply at the fuse-board.
3. If removing an existing fitting first, note all wiring connections: record which of the house wires is connected to the live, neutral and earth terminals.
4. Carefully identify where the supply cable is (and check there are no other cables in the area) to avoid damage to concealed wiring during installation.
5. Position the light where desired ensuring that there is suitable support adjacent to where you will connect to the house supply and mark position of fixing holes, before drilling appropriate holes as below.
  - a. Brick or masonry: Drill holes into which the wall plugs tightly fit, then insert wall plugs.
  - b. Wood: No hole necessary (unless small pilot hole required), screws can be screwed directly into the timber.
  - c. Plaster/Cavity: Special cavity wall fittings are required, rather than provided fixings. These are widely available from good hardware or DIY store and should come with their own instructions that must be followed. It may be easier to relocate the fitting so that you screw directly into a timber joist or beam.
7. Once the desired drop is determined, adjust the flex length accordingly. Consult an electrician if in any doubt.
  - Use wire cutters to cut flex at desired length and then remove 15mm of the cotton braid and outer insulation (making sure no damage occurs to the interior cables). Apply electrical tape around the end of the cotton braid to prevent fraying.
  - Remove 5mm of insulation from the conductors, ready to be wired into a connector block.
8. Support the fitting so that no strain is applied to the wiring when making the electrical connections. If necessary get a colleague to help.
9. Electrical connection: this light fitting is double insulated, DO NOT connect to an Earth wire or terminal. Make connections using the connector block, following the diagram below. A small flat-head screwdriver is required.

10. Double check all the connections are secure and that no loose strands of wire are left out of the connector.
11. Check that no wires are trapped behind or within the fitting and complete the installation, see hanging instructions inside.
12. Fit the correct type and wattage of lamp (or less). Be careful not to overtighten the lamp.
13. Switch on at the fuse-board. Your light fitting is now ready for use.

## Other Important Information

Switch off at mains before changing lamp(s). Never fit a lamp of greater wattage than recommended. Ensure children do not play with the light fitting. Dispose of old lamps carefully. Never leave a fitting without a lamp in position (or someone can accidentally touch the contacts). Adjust fitting only when power to the fitting is off and has been left to cool. If the external flexible cable or cord of this luminaire is damaged, it shall exclusively be replaced by the manufacturer or his service agent, or a similar qualified person in order to avoid a hazard. For use in a dry, indoor environment only. Ensure the fitting does not come into contact with any liquids.

## Cleaning and Maintenance

Metal finishes should only be cleaned with a soft, dry cloth. Do not use polishes or abrasives. Switch off power to the fitting before cleaning.

Established in 1990, Original BTC manufactures relaxed, familiar lighting for traditional and contemporary homes. All products are hand-assembled in Oxfordshire from high quality components, produced in the UK.

## Contents

## Contents

- A Ceiling rose
- B Grub screw cord grip
- C Suspension wire
- D Wire grip
- E Cable
- F Shade
- G Fixing screw (x2)
- H Rawl plug (x2)
- I 3-Hole cord grip
- J Connector block
- K Hanging bracket
- L Cotter pin
- M Hex wrench

## Tools Required

- Cross head screwdriver
- Small flat-head screwdriver
- Drill (if holes are required)
- Pliers/wire cutters

## Main Supply Cable Preparation

Please prepare the supply cable as shown. Note the maximum conductor size 1.5mm<sup>2</sup>.

## Hanging Instructions

### Key

- A Ceiling rose
- B Grub screw cord grip
- C Suspension wire
- D Wire grip
- E Cable
- F Fixing screw
- G Rawl plug
- I 3-Hole cord grip
- J Connector block
- K Hanging bracket
- L Cotter pin

## Hanging Instructions

- STEP 1** - Read through all the instructions, including those on the back page, before starting any work. Ensure the power supply is disconnected at the fuse board. We recommend this fitting is installed by a qualified electrician.
- STEP 2** - Determine the location of the luminaire before marking and drilling suitable fixing holes. Please refer to points 1 - 6 on the back page.
- STEP 3** - Secure the hanging bracket (K) to the ceiling using the fixing screws (G) and rawl plugs (H) provided, or other suitable means as described on point 6 on the back page.
- STEP 4** - Determine the desired drop of the fitting and shorten the suspension wire (C) as necessary using pliers/wire cutters. Please note that the weight of this fitting is designed to be supported by the wire, not the cable (E). Create a loop with the wire grip (D), securing it using the supplied hex wrench (M).
- STEP 5** - Shorten the cable (E), if necessary. Refer to step 7 on the back page and the diagram opposite. Please ensure the cable is longer than the suspension wire, and leave around 10cm of slack to wire to the connector block (J).
- STEP 6** - Feed the cable through the MIDDLE THEN BOTTOM holes of the 3-hole cord grip (I).
- STEP 7** - Suspend the 3-hole cord grip (I) and suspension wire (C) from the hanging bracket (K) using the cotter pin (L). Bend one 'leg' of the cotter pin back with a pair of pliers to prevent it from slipping out of the bracket.
- STEP 8** - Make the connections to the main supply, using the connector block (J) provided. Please refer to points 8 - 11 on the back page.
- STEP 9** - Push the ceiling rose (A) up until it is flush with the ceiling. Tighten the grub screw cord grip (B) to secure it in position. Take care not to overtighten the grub screw, as this can damage the cable.

PLEASE READ THE INSTRUCTIONS ON THE REVERSE BEFORE YOU BEGIN INSTALLING YOUR LIGHT
